Youth Tobacco Use (1998)**Summary of the problem**

- ☐ Adult cigarette smoking has been somewhat higher than the state average since 1992, although this difference is non-significant; adult smokeless tobacco use is significantly higher than the state average.
- ☐ Youth tobacco use for the Eastern Washington region is elevated above the state rate for both cigarettes and smokeless tobacco, among all age groups. More data collection is needed to describe tobacco use among Stevens County youth.
- ☐ Maternal smoking during pregnancy is consistently and significantly elevated above the state rate, but does exhibit the same declining trend seen throughout the state.
- ☐ Retailer compliance appears somewhat worse than the state average (retailers are more likely than average to sell tobacco to minors).
